

Resale Price Index from 1st Quarter 1990 to 2nd Quarter 2026

The HDB Resale Price Index tracks the overall price movement of the public residential market. The index is calculated using resale transactions registered across towns, flat types and models, with the first quarter of 2009 as the base period (i.e. index has value 100 in 1Q2009).

The Index is used by comparing how it changes from one period to another. For example, if the index increases from 100 to 108 in one year, it means that on the whole, HDB resale flat prices increased by 8% over this period.
